

STC-80

Handheld dynamic microphone

The STC-80 is Sontronics' first handheld dynamic microphone. It boasts the same rugged construction as Sontronics' handheld condensers and offers a high-quality dynamic capsule. The STC-80 has a solid feel with superb sound quality and low handling noise. It delivers first-class results on stage and in the studio. While ideal for vocals and speech, the STC-80 also performs well as a direct microphone for guitar cabinets, snare drums, and toms. Its internal pop filter effectively reduces plosive sounds. The STC-80 is packaged in an aluminum flight case for ultimate protection on the road.

Frequency Chart: STC-80

Specifications:

Frequency response:	50Hz -15KHz
Sensitivity:	-54dB \pm 2dB (0dB = 1V/Pa)
Polar pattern:	Cardioid
Impedance:	\leq 600 Ohms
Connector:	3-pin MXLR
