

AURO X12D / X15D

1,000-Watt Active Loudspeakers

The elements of power, precision and value have inspired Samson's Auro X Series 1,000-Watt Active Loudspeakers. Lightweight yet resilient, these loudspeakers boast an impressive 1,000 watts of output power and Samson's own R.A.M.P. DSP technology for full-range, high definition audio at all volume levels. Encompassing two compact designs (X12D and X15D), the Auro X Series provides versatile speaker solutions for gigging musicians, DJs and live sound professionals.

Both the Auro X12D and X15D feature a lightweight 1,000-watt Class D amplifier and Samson's R.A.M.P. Digital Signal Processing (DSP) technology. The R.A.M.P. DSP provides Reactive Alignment that continually corrects the audio signal, ensuring a high-integrity linear response. It also offers the speakers and their components with Maximum Protection via over current/temperature sensors and fault indication.

Thanks to their respective 12" and 15" extended low frequency drivers and accompanying 1.34" compression drivers, the Auro X12D and X15D generate a well balanced and incredibly articulate audio experience. Their back panels offer two XLR-1/4" input channels, each with independent volume controls. They also feature a Master Volume control, as well as a 3-position EQ and HPF presets for different applications and setups. Lastly, an XLR Link output lets you expand your sound with the integration of additional powered speakers.

Each Auro features a 1 3/8" speaker stand mount receptacle and dual-angle floor monitor positioning options for maximum performance versatility. For additional convenience, these speakers each offer two oversized ergonomic carry handles. Lastly, their solid polypropylene construction, impact resistant design and full metal grills ensure roadworthy durability.

Setting a new value standard in loudspeaker performance, Samson's Auro X Series 1,000-Watt Active Loudspeakers are perfect for sound professionals and dynamic performers seeking serious power and true sonic purity.

FEATURES

- Compact, lightweight Class D active loudspeakers
- 1,000 watts of output power
- X12D: 12" extended range low frequency driver
- X15D: 15" extended range low frequency driver
- 1.34" (34mm) titanium compression driver
- Samson's R.A.M.P. DSP technology
- Master Volume control with peak indicator
- Two XLR-1/4" combo input channels with independent volume controls
- 3-position EQ and HPF presets
- XLR Link output allows expanded sound to additional speakers
- Solid polypropylene enclosure with impact resistant design
- Full metal grill protects all speaker components
- Two large ergonomic carry handles
- Integrated 1 3/8" speaker stand mount
- Dual-angle floor monitor positioning options
