

MTR101A

Studio Mic Kit

Samson's MTR101A Studio Mic Kit brings exceptional performance and high-end quality to a variety of live and studio situations. Ideal for recording vocals, close miking instruments, use as a room microphone and more, the MTR101A (MTR101 Condenser Microphone, pop filter and shockmount included) solidifies, Samson's commitment to offering superior sound and the ability to capture the best audio possible.

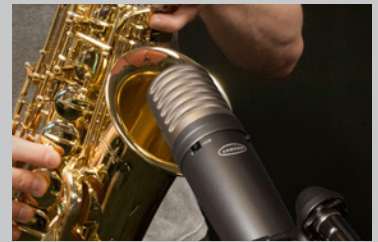

The MTR101 is a large, 1" diaphragm studio condenser microphone. It features a cardioid pickup pattern that provides increased isolation of a sound source and is designed to handle high SPLs of up to 137dB. The MTR101 produces a smooth, extended frequency response, as well as low self-noise and a wide dynamic range perfect for recording. In addition, its rugged die cast construction features an internally shock-mounted capsule that reduces handling noise and external vibrations.

In addition to the mic, the MTR101A kit includes a pop filter and shockmount. The pop filter features a stainless mesh screen that reduces vocal popping and sibilance. The filter is easily attached directly to the mic, and just as easily removed. The kit's specifically designed shockmount provides the mic with enhanced isolation from mechanical noise, and is compatible with all standard microphone stands.

Sound superior with the new MTR101A Studio Mic Kit from Samson.

FEATURES
