## Bass Combos

PRODUCT INFORMATION

2015

Kickback KB12

Hartke has revamped its critically acclaimed Kickback Series Bass Combos with a high-powered, lightweight design available in two models. The new Kickback KB12 and KB15 also feature Hartke's patented HyDrive Speaker Technology with rare earth neodymium magnets. With 500 watts of Class D power, these revitalized Kickback combos are the new premium in portable bass amplification.

Hartke's revolutionary HyDrive speakers feature carefully crafted paper/aluminum hybrid cones designed to deliver the perfect match of warmth and attack. The use of rare earth neodymium magnets lets the HyDrive speaker shed the typical weight of a bass cabinet and maintain the tight punch that has defined the Hartke sound.

Along with their respective 12" and 15" HyDrive speakers, the KB12 and KB15 feature a 3-band EQ, XLR direct output, and unique Shape filtering. The Shape effect applies an equalization curve to the frequency area of your choice. In addition, an ultra-lightweight amplifier design, vinyl covering and perforated steel grills ensure Kickback Bass Combos can transition seamlessly from your home to practice spaces and performance venues.
