## S7000 Technical Datasheet

## Overview

- 36 faders, 6 layers
- Fully assignable layout - up to 216 fader strips
- Harmony UI integrates screen and wrap-around controls
- Twin 12" capacitive touchscreen
- Gesture control - pinch, swipe, drag ' $n$ drop
- Dedicated multi-mode EQ view
- Configurable widget areas for Scenes, meters, FX and more
- 3 pages of 6 assignable rotaries per screen
- 26 assignable SoftKeys
- Engineer's Wedge and IEM fader strips
- Comprehensive multipoint metering
- Daylight visibility
- USB stereo recording and playback
- 8 XLR mic/line in, 8 XLR line out
- 2 digital st AES3 in, 3 digital st AES3 out
- Connection hub
- Dual redundant GigaACE gigabit link to MixRack
- 1x redundant $D X$ link for I/O expansion
- $2 \times \mathrm{I} / \mathrm{O}$ Ports - 128 ch 96 kHz each
- 2x Network ports
- Wordclock BNC I/O
- Video output
- Dual redundant, hot swappable power supply

## A\&E Specifications

The control surface shall have 36 moving faders in three banks, each with 6 layers accessed by dedicated keys. All fader strips shall be configurable as input channels, mixes, FX sends, FX returns, DCA masters, or MIDI strips. Each fader strip shall have a dedicated PAFL, Mix, Select, and Mute button with indicators, 22 -segment multi-point meter, 6 -segment gain reduction meter, rotary encoder, and coloured LCD display with name, mode, status, and level indicating. 7 buttons with indicators shall provide global mode for the rotary controls being Gain, Pan, Sends and up to 4 custom functions. Send levels to mixes shall be adjustable using the faders.

A 12" capacitive touchscreen shall be provided for access to meters, FX, I/O, scene management, setup, utilities and diagnostics. A further 12 " capacitive touchscreen shall be dedicated to channel processing. Physical, dedicated controls shall be provided for adjustment of gain, HPF/LPF filters, and 4band PEQ. Further physical controls shall be user assignable, including 2 sets of 6 rotary encoders arranged over 3 layers, and 26 user-defined keys. Dedicated keys shall be provided for quick Copy/Paste/Reset of mixes and processing parameters, pre/post and mix assignments, scene safes, GEQ fader flip, PAFL clear, scene automation, talkback, and access to libraries.

22-segment meters shall indicate the 3 Main mix levels, the PAFL signal shall override the LR meters accompanied by a PAFL-active indicator. $1 / 4$ " and 3.5 mm jacks for the surface PAFL headphones output shall be provided, plus an analogue
output level control. The mixer shall include a 2-track record and playback system for optional USB drives. The surface shall have 2 USB ports on the front, one of which dedicated to record / playback, and a further USB port on the back panel.

The surface shall provide 8 XLR inputs of high quality and capable of handling microphone or line signals, with remote controlled analogue gain adjustable in 1 dB steps, a 20 dB PAD, and phantom power. It shall also provide 8 XLR line outputs, 2 AES-3 stereo XLR inputs with SRC, and 3 AES-3 stereo XLR outputs with SRC. There shall be an option to bypass the Sample Rate Conversion on the digital inputs or outputs.

Two 128-channel I/O ports for optional digital interface modules shall also be provided. Optional interface modules shall include: MADI, EtherSound, Dante, Waves SoundGrid, and ACE.

A pair of Ethercon ports shall be provided for redundant connection to the rack engine via the Allen \& Heath gigaACE protocol. This connection shall carry over $300 \times 300$ channels of uncompressed audio at 96 kHz , control data and tunnelling of third party Ethernet traffic. 2 Ethercon ports shall be provided for I/O expansion via a redundant audio connection carrying up to $32 \times 32$ channels of uncompressed audio at 96 kHz . A range of optional expansion racks shall be provided and shall include a modular rack with 8-channel card options including analogue or digital I/O.

A pair of BNC connectors shall be provided on the unit for Wordclock input and output. A pair of RJ45 sockets shall also be provided for gigabit Ethernet network connections to laptops or other control systems.

The unit shall have a modular power supply accepting AC mains voltages of $100 \sim 240 \mathrm{~V}, 50 / 60 \mathrm{~Hz}, 300 \mathrm{~W}$ max via an earthed 3 -pin IEC male connector. A rocker switch shall be provided near the mains inlet to isolate the unit from the incoming mains supply. The unit shall also provide the option
for a second, hot-swappable, redundant power supply. This shall be of the same type and interchangeable with the power supply fitted as standard.

An option shall be provided for password protection for log-in of several users with different levels of system access and permissions.

The control surface shall be the Allen\&Heath dLive S7000.

## Technical Specifications

## Inputs

| Mic/Line XLR Inputs | Balanced XLR, +48 V phantom power |
| :--- | :--- |
| Mic/Line Preamp | Fully recallable |
| Input Sensitivity | -60 to +15 dBu |
| Analogue Gain | +5 to $+60 \mathrm{~dB}, 1 \mathrm{~dB}$ steps |
| Pad | -20 dB Active PAD |
| Maximum Input Level | +30 dBu (PAD in) |
| Input Impedance | $>4 \mathrm{k} \Omega$ (Pad out), $>10 \mathrm{k} \Omega$ (Pad in) |
| Mic EIN | -127 dB with 150 source |
| Phantom Power | Per socket, internal or external <br> phantom power sensing, triggered at <br> indication |

$\begin{array}{ll}\text { Digital Inputs } & \begin{array}{l}\text { AES3 } 2 \text { Ch XLR, 2.5Vpp balanced } \\ \text { terminated } 110 \Omega\end{array} \\ & \text { SRC on each pair, range 32k - } \\ \text { 192kHz, with bypass option }\end{array}$

|  |  | Sampling Rate | $96 \mathrm{kHz}+/-20$ PPM |
| :---: | :---: | :---: | :---: |
| Outputs |  | ADC | 24-bit Delta-Sigma |
|  |  | DAC | 24-bit Delta-Sigma |
| Analogue XLR Outputs | Balanced, Relay protected |  |  |
| Output Impedance | $<75 \Omega$ | Latency | $<0.6 \mathrm{~ms}$ (MixRack XLR in to XLR out, Input to Mix) |
| Nominal Output | $+4 \mathrm{dBu}=0 \mathrm{~dB}$ meter reading |  | + 5 samples, Surface to Mixrack (GigaACE hop) |
| Maximum Output Level | $+22 \mathrm{dBu}$ |  | +8 samples, DX32 to Mixrack (DX hop) |
| Residual Output Noise | -92dBu (muted, 20-20kHz) |  |  |
|  | -90 dBu (muted, 20-40kHz) | Operating Temperature Range | $0 \operatorname{deg} \mathrm{C}$ to $35 \operatorname{deg} \mathrm{C}$ (32 deg F to 95 $\operatorname{deg} \mathrm{F}$ ) |
| Digital Outputs | AES3 2 Ch XLR, 2.5Vpp balanced terminated $110 \Omega$ | Mains Power (MPS16) | 100-240V AC, 47-63Hz, 300W max |
|  | 96 kHz sampling rate, switchable to $48 \mathrm{kHz}, 44.1 \mathrm{kHz}$ |  |  |

## Dimensions and Weights

|  | Width $\times$ Depth $\times$ Height $\times$ Weight |
| :--- | :--- |
| S7000 | $1325 \times 728 \times 413 \mathrm{~mm}(52.2 " \times 28.7 " \times$ <br> 16.3 " $) \times 41 \mathrm{~kg}$ (901bs) |

## System

Measured balanced XLR in to XLR out, 20-20kHz, minimum Gain, Pad out

Dynamic Range 110 dB
System Signal to Noise -92dB
Frequency Response $\quad 20 \mathrm{~Hz}-30 \mathrm{kHz}+0 /-0.8 \mathrm{~dB}$
THD $+N$ (analogue in to $0.0015 \%$ @ + 16dBu output, 1 kHz out) OdB gain

Headroom +18 dB
Internal operating Level 0 dBu
dBFS Alignment $\quad+18 \mathrm{dBu}=0 \mathrm{dBFS}(+22 \mathrm{dBu}$ at XLR
output)
0 dB meter $=-18 \mathrm{dBFS}(+4 \mathrm{dBu}$ at XLR out)

Meter Peak indication $\quad-3 \mathrm{dBFS}(+19 \mathrm{dBu}$ at XLR out)
