

# Pro Smoke High Density

Pro Smoke High Density (SP) fog fluid produces a very long lasting non-toxic water based fog. It's longevity means that foggers must be reprogrammed for short, less frequent bursts to avoid saturation of the atmosphere. By following this instruction, fluid consumption can be reduced dramatically. Pro Smoke High Density (SP) fog fluid is best described with the characteristics of high density, white airborne fog, with long hang time; it has a slow evaporation rate and high index of refraction. In environments unaffected by extraction and air-conditioning, Pro Smoke High Density (SP) fog fluid can be expected to dissipate 30% slower than Pro Smoke Super (ZR) fluid. This makes it well suited for scenic obscuring, strobes, and "white-out" conditions - which is why it is often specified for military and fire/EMS training simulations in addition to the conventional performance arts based applications.

Available in 5, 9.5, and 220 l containers.
