OMX-PSW6RS

6x1 9-Pin RS422 Control Passive Switcher

The **OMX-PSW6RS** is a passive 6X1 RS422 switcher designed for today's demanding multi-format production facilities. The unit features 6 standard 9-Pin D-Sub female inputs which are selectable to a single output.

This switcher is very useful for Non-linear edit studios where a variety of VTRs must be controlled by the single control port of the system. Since the **OMX-PSW6RS** is passive, it may also be used as an assignment switcher, where a single RS422 signal can be fed to 6 destination VTRs. The **OMX-PSW6RS** simplifies the demand for such multipoint operations in a single product.
