1. LEVEL CABINET

WARNING! This step requires two people.

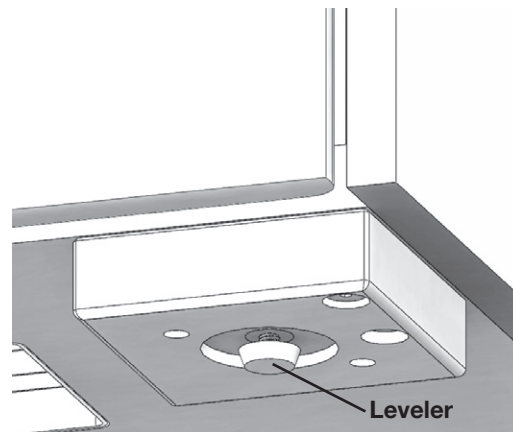

Leveler Foot

Loosen jam nut with supplied wrench and tighten to the locked position.

Wood Block Foot

Lift cabinet and adjust leveler by hand.

2. INSTALL SHELVES

NOTE: Shelf pegs can be re-positioned if desired.

A. Shelf placement can be adjusted if necessary to either predrilled locations or any location using Drop-In Nuts (I) Shelf Peg assembly (see diagram below).

B. Place shelves on pegs.

Drop-In Nut Option

Should you desire shelf placement in location other than predrilled locations, use the drop-in nut option. This option allows shelf to be placed at any height.

Assemble loosely as shown.

Insert into post channel and slide to desired height. Level shelf by adjusting shelf peg positions and tighten screw using hex key.

Note: Drop-in nut must make a 1/4 turn in post.

3. INSTALL REAR COOLING PANEL

A Attach Thermistor

Use supplied magnetic cube to hold thermistor in place on top of the hottest piece of equipment closest to the heat source.

Alternative connection, connect the thermistor directly to the component. Loosen screw and slip the thermistor wire under the screw head and tighten.

B Plug in Power Supply

Plug in Ac adaptor bottom center behind fan grill.

C Install Rear Cooling Panel

Squeeze in the provided handled slots and pull outward until panel is free.

NOTE: Reverse step for re-installation. Upon removal, carefully place rear panel in the up right position so not to damage the fan assembly.

ADJUSTMENT TIPS

DOORS

NOTE: It is important that cabinet is level before adjusting doors, see step 1.

A **Main Adjustment (Side to Side and Up/Down)**
Adjustment is made by turning screw (A) in and out.

Adjust the tops of the doors to be parallel to the top of the cabinet.

Dismount Hinge from Hinge Plate
With one hand holding the door open, pull back on the hinge quick-release lever (B).
