GLYPH FORTERAID EXTERNAL RAID ARRAY

Features eSATA, FireWire 800/400, USB 2.0 connectivity, hardware RAID 0, 1, 3, 5, 10, and spanning modes. These RAID modes provide speed, fault-tolerance, or a combination of both. If a drive fails when running in one of the fault-tolerant drive modes (RAID 1, 3, 5, 10), you can remove and replace it with a spare drive without losing any data. ForteRAID also allows for a "hot-spare" (an online spare drive present in the chassis, allowing for immediate rebuild without user intervention.) With up to 12TB capacity, it supports NLE applications such as Avid Xpress and Adobe Premiere. It has also been tested with Final Cut Pro.
