

**ETC SELADOR LED LIGHT FIXTURES**

Go beyond effects lighting and give your theater effective LED luminaires that can be trusted in every application from key, fill and side light to color washes and cyc lighting. Selador™ Series fixtures perform to your standards for warm and cool white light, soft tints, rich pastels, and intense primary colors, without sacrificing energy efficiency. All use the x7 Color System™ – 7 color LEDs providing the broadest color spectrum in any LED fixture. Every Selador luminaire is versatile enough to provide a broad range of color and white light, but optimized for a specific lighting task.

**DESIRE™**

The Desire D40 contains 40 Luxeon® Rebel LED emitters comprised of 7 different colors and features a user interface on the rear. It can also be controlled using any RDM-enabled controller. Offers 5 different DMX profiles: Calibrated RGB, Calibrated HSI, Calibrated HSIc, Direct, and Studio. D40XT fixtures share the 40 Series' features but adds waterproof and weatherproof housings.

**ETC SOURCE FOUR® LED**

Combines the size, look, and optics of the Source Four family with the user-interface and high efficiency of the Selador Desire™ line of LED luminaires. With no burnt gels or lamps to replace, Source Four LEDs have the highest lumens per watt of any LED spotlight while retaining a 50,000-hour life. Uses the same shutter barrel, accessories, and lenses as existing Source Four fixtures (Enhanced Definition lens tubes are suggested). Features 60 Luxeon® Rebel LED emitters and comes in daylight, tungsten and lustr+ configurations. Available with the LED light engine only or the light engine w/shutter assembly.

**PALETTA™**

This 2.5W color-mixing fixture is available in 4 different lengths. Uses a medium-power LED with color mix that is balanced for very bright output in the red, orange, pink, magenta, purple, blue, and indigo color families (white light has slightly less brightness). Since it is designed for colored light applications it should be used where only 4 or 5 colors will be used at the maximum level for an extended time period. Great for small and mid-size cycs and stage washes. It also fits in smaller spaces for architectural applications.

**LUSTR®**

This light is the white light specialist and available in 4 lengths. It uses the same medium-power LED as Paletta with a color mix that is balanced for high-brightness white and tinted colors. This LED array uses a new Phosphor-Converted Amber LED which provides high brightness and a broader spectral content than regular Amber LEDs. Use this product for key and fill lighting in studios or mid-size theatres. It can also be used with good results on a cyc or in other color applications as well.

**VIVID-R**

Vivid-R combines high-power Luxeon® Rebel LEDs and high-efficiency lenses for a strong, cutting beam of light and maximum color production. Clear lenses allow a more direct, powerful beam, resulting in longer throws. It provides higher light output than the original Vivid™ fixture while using less power and generating very little heat. The Vivid-R Fire models are dedicated to the warm (red, orange, yellow) spectrums and the Ice models dedicated to the cool (blue) spectrum. Vivid-R models are available in 4 lengths and the Fire/Ice models in 2.
