beyerdynamic

BEYERDYNAMIC STEGOS WIRELESS BOUNDARY MICROPHONE SYSTEM

The Stegos wireless boundary microphone system was designed for use with video conference systems. A maximum of three independent Stegos systems can be simultaneously operated in neighboring rooms. The Stegos RS receiver provides three different connections for video conference systems: 3-pin Phoenix terminal strip, 1/8" jack and 3-pin XLR. Individual microphone signals can be picked up via a multipin Phoenix terminal strip. An RS232 interface and USB connector are provided for data exchange with media control systems or PCs. With a PC connected to the receiver, the volume of the individual Stegos TB mics can be controlled and the On/Off or Push-To-Mute operating modes can be selected with the supplied user-friendly Stegos software. A maximum of four boundary microphones can be operated with one receiver. The Stegos TB boundary mic provides a semi-cardioid polar pattern with high gain before feedback and is powered via integrated rechargeable NiMH batteries. Operating time is not less than 14 hours. The microphone can be recharged in approximately two hours (via included power supply) and can also be operated via a power supply unit connected to the DC connector. The Stegos CB single unit charging bay can be used to organize the Stego TB's while charging.
