

SONORA

Dual-channel preamplifier / DI box

The SONORA is a dual-channel preamp/DI box offering 2 discrete solid-state channels that deliver pristine, transparent results. Both channels offer a full 60dB of distortion-free headroom, controlled by twin 12-step input level selectors, for simple level matching. Front panel switches control a 75Hz high-pass filter, -20dB attenuation and 48V phantom power for each channel.

Sonora has electronically-balanced I/O and is able to handle analogue signals at line level, DI'd instruments, and any microphone, phantom-powered, ribbon or dynamic. Each channel has balanced XLR and Jack I/O and signal and clip LEDs. Ideal for stereo miking applications, Sonora's classy sound and compact size makes it a simple choice for anyone searching for a quality analogue stereo preamp/DI.

Specifications:

Frequency response:	$\pm 0.1\text{dB}$ 20 Hz to 20 KHz
THD + N:	$\leq 0.0009\%$
Output level:	+16dBu
Noise:	-93dBu
Common mode rejection:	86dB
Maximum output level:	+26.7dBu
Crosstalk:	-123dB
