

Rolls

MP322 Hi-Fi Music Card Reader

Description

The ROLLS MP322 is a half-rack space MP3 Music Player. The Hi-Fi Card Reader plays back music stored on USB 1.1/2.0 Flash drive, Secure Digital (SD) and Multimedia (MMC) cards. You can also download MP3 music from your PC via the USB port to the MP322 and then store it on an SD or MMC card. Supplied RCA and 3.5 mm audio cables make it easy to connect the MP322 Card Reader to your audio system. The MP322 is Bluetooth compatible for pairing to other audio devices and includes a wireless remote control.

Applications

Until very recently, an installation of various Audio Sources would include an AM/FM Tuner, a CD Player, a Cassette Player and perhaps options for a Juke Box or the audio from a video source. However, a contemporary audio source installation must now include the ability to play back music in MP3 format stored on various USB, SD and MMC cards. The Rolls MP322 Hi-Fi Music Card Reader is the perfect addition to an audio installation or it can be added to a home Hi-Fi stereo set up or used directly with powered speakers. Music can be played back as stored on the cards, or with one of the built in repeat modes and there are 5 preset EQ options.
