PF Series Intelligent Amplifiers

Passive, powered or networked: you can choose the SG/SGX system that suits your needs at any time. At the factory or in the field, the SGX passive connector plate can be easily replaced by a PF1-200 series Class D digital amplifier with loudspeaker specific processing. The PF1-200's lightweight switching power supply delivers 70% efficiency at full output, reducing AC requirements and eliminating the need for a cooling fan.

Whenever you are ready for Ethernet audio networking, your Sygma loudspeakers are, too; just replace the connector plate or the PF1-200 with a RHAON empowered amplifier equipped for connection to the Renkus-Heinz Audio Operations Network. RHAON empowers you with full control over digital audio distribution, loudspeaker-specific DSP and control/monitoring – all using standard Ethernet hardware and cable.

Ready now for a self-powered Sygma System? order the SG61-2. If you need full audio operations networking, order the RHAON empowered SG61-2R.
