- 1920x1080 high definition video recording:
1920 x1080 high definition resolution lets you record your memories in exceptional Sony® Full High Definition quality².
- 4 megapixel still image capture:
4 megapixel still image capture lets you take high resolution digital photos.
- 120GB hard disk drive:
A built-in 120GB¹ hard disk drive can record and store approximately 48 hours of high definition video footage (HD LP mode), or up to 84 hours of standard definition footage (SD LP mode). In addition, "HDD Smart Protection" gives you peace of mind by helping to prevent any recorded video and images from being lost if the camcorder is accidentally dropped.
- Geotagging with built-in GPS receiver:
A built-in GPS receiver⁷ makes the HDR-XR200V an ideal choice for travelers. In addition to automatically adjusting your camcorder's clock to the proper time zone, the GPS receiver also gives you the ability to view your current location on the LCD map display, as well as "tag" your shooting locations. Tagged videos and still images can be reviewed and played back using the Map Index function on the camcorder or once downloaded to your PC using the supplied PMB (Picture Motion Browser) software⁹.
- Map Index function:
Map Index uses the geotagging capabilities of the built-in GPS receiver⁷ to "tag" your shot locations on a map in the camcorder, offering a new way to easily search and find a desired scene by location or view where a scene was captured.

- Face Detection technology for Video Footage and Digital Still Photos:
Made possible by the BIONZ™ image processing engine, Face Detection technology recognizes up to 8 faces anywhere in the frame and by selecting the most prominent, automatically controls focus, exposure, and color to help capture smiling faces brightly and clearly. Face Detection technology also helps make skin tones look natural without affecting other colors in the image. On AVCHD models, the camcorder allocates encoding bits on detected face areas prior to encoding other parts of the picture, making them sharper and clearer. In still picture mode, Face Detection technology sets the flash level to optimize picture clarity.
- Smile Shutter™ technology for still and dual capture:
Smile Shutter™ technology lets the camcorder automatically take still photos when your subject smiles, even while shooting high definition video. You can also set the sensitivity and choose child, adult, or auto priority.
- Optical SteadyShot™ image stabilization with Active Mode:
Optical SteadyShot™ image stabilization with Active Mode represents the next step forward in Sony® image stabilization technology. Active Mode improves on existing Optical SteadyShot image stabilization by allowing the camera lens to shift over a greater range of motion. This allows the HDR-XR200V to compensate for greater degrees of camera shake and deliver a stunning level of image smoothness.
- Highlight Playback:
Why spend hours editing your movies when you can let your camcorder do it for you? Highlight Playback uses several criteria - including Face Index, Smile Shutter™ technology, Dual Capture and time range - to identify and compile key scenes into a short, entertaining movie complete with music and transitions.
