

PRELIMINARY

CVA 100

CobraNet Enabled Amplifier

The CVA100 is Stewart Audio's first amplifier to feature a factory-installed CobraNet option. This highly-efficient constant voltage amplifier delivers 100W to each of its two channels while still fitting into a half rack package.

CobraNet Features

CobraNet is a cutting edge networked-audio protocol developed to transmit uncompressed audio and control data over a standard network. The CVA100 utilizes CobraNet via an optional factory-installed daughter card. With this option installed, the CVA100 will act as an endpoint to any new or existing CobraNet system. This allows the CVA100 to be placed anywhere sound is needed and receive up to two channels of audio through its network interface.
