

VIDEO PROJECTOR INTERFACE

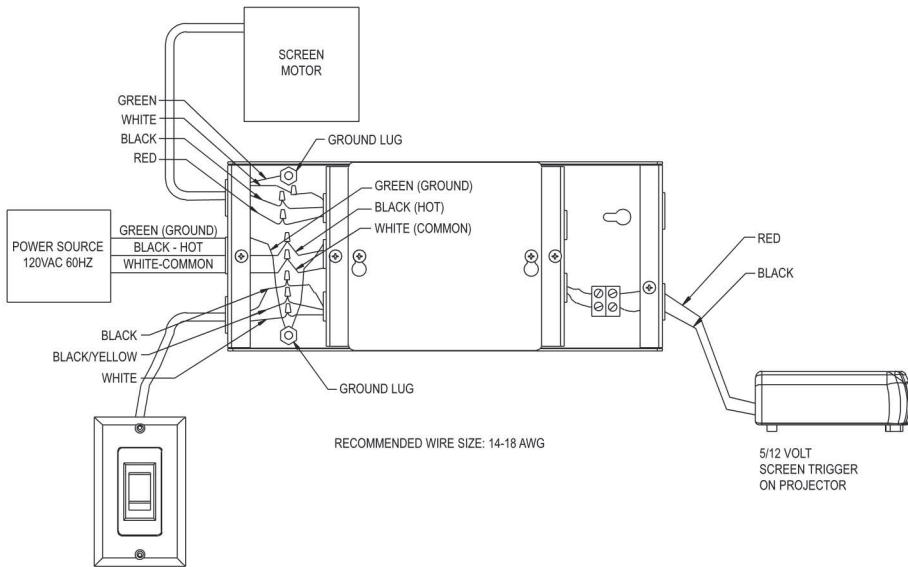

Available for 12-volt or 5-volt projector outputs, the redesigned Video Projector Interface triggers with 5 milliamps. The new lower milliamp requirement will allow for interfacing with a greater variety of projectors. DC controls allow the screen to be raised or lowered automatically when the projector is switched on or off. The Video Projector Interface is housed in a junction box and includes a rocker style wall switch with Decora® coverplate.

ELECTRIC SCREENS

VIDEO PROJECTOR INTERFACE
