DMS70

Indoor Conference Seminar, School Live Sound / Club Music

- AES 128 bit Encryption
- · Dynamic frequency selection
- Patented D5 acoustics
- Studio audio quality
- 2 or 4-channel receiver
- · Bidirectional communication
- Auto power off
- OFDM Modulation
- True uncompressed audio transmission

Digital Wireless Microphone System

DMS70 is a true uncompressed digital wireless system. The DMS70 operates with 24bit 48 kHz transmission to ensure top-quality audio for every customer. The frequency is the 2.4GHz ISM range, a worldwide license-free frequency range. DMS70 system offers exceptional studio-quality sound thanks to its uncompressed digital audio transmission capability and it is designed for the most exacting applications where the highest level of wireless audio performance is required. The bodypack (pocket) transmitter is especially recommended for guitar and bass because of its ideal frequency response between 20 Hz to 20 kHz. DMS70 works convincing for live and club sound, conferences, seminars, schools and universities – whenever quick and easy setup up is required.

The entire DMS70 package includes: AKG's DSR70 or DSR70 Dual Receiver, DPT70 Digital Pocket Transmitter and DHT70 Digital Handheld Transmitter, available with patented D5 acoustics or DHT70 Perception with standard dynamic capsule.

The DSR70 includes a rack mount kit, power supply and other accessories. The customers can use and combine all system devices according to their needs, as they are all fully compatible. All DMS70 devices are available separately or in the following packages: DMS70 Q Vocal Set Dual, DMS70 Q Instrumental Set Dual, DMS70 Q Vocal/Instrumental Set Dual, DMS70 D Vocal Set and DMS70 D Instrumental Set.

The Q sets include two digital transmitters and the D sets one digital transmitter.

All DMS70 devices feature bidirectional communication between the transmitter and receiver. The dynamic frequency selection provides "intelligent" operation in the crowded 2,4 GHz band, enabled by digital diversity from receiver and transmitter side. Its easy setup functions make the system simple to use even for less experienced operators, while the AES 128-bit encryption ensures secure 2-way wireless communication. The DSR70 receiver can work with up to four channels of audio in parallel which can be mixed down directly to its balanced XLR sum output. The DHT70 mic employs AKG's patented dynamic D5 capsule to deliver outstanding sound quality with less feedback and handling noise.

Based on the bidirectional communication DMS70 offers a number of additional new and unique features, including power off from receiver side for all connected transmitters, battery status monitoring and out of range warning.

DSR70 / DSR70 Dual

- Dynamic frequency selection in 2,4GHz ISM band
- 19" and half 19" metal case
- Easy setup functions designed for less experienced operators
- 4 Channels (DSR70)
- . Off function for all transmitter
- · Clip led's on receiver
- Transmitter battery status monitoring
- 4x balanced channel and 1x sum output on (DSR70)
- Stand alone and 19" rackmount brackets (DSR70)

- Dynamic frequency selection in 2,4GHz ISM band
- Belt clip upside/down
- Easy setup functions designed for less experienced operators
- Integrated screw driver
- Auto power off
- Low bat warning
- Adjustable input level (mic-guitar)
- Phantom power 5V for all MicroMics
- Digital controlled antenna diversity

Guitar cable MKGL, standard 6,35mm jack – mini XLR connector for use with all AKG pocket transmitters.
