FOR IMMEDIATE RELEASE

June 10, 2013

Eminence Speaker Introduces a 1.4" Exit Compression Driver.

Eminence, KY – Eminence Speaker LLC is proud to add a 1.4" exit compression driver to their popular line of HF products, the **PSD:3014**.

With a 100 watt continuous AES power rating, the **PSD:3014** features a 3" voice coil and a recommended minimum crossover frequency of 800 Hz. "Sporting the same family resemblance of the PSD:3006, you would be hard pressed to find a compression driver that reliably plays as low and as loud as the PSD:3014," says **Matt Marcum**, Design Engineer at Eminence. "It's a large, robust, and well-made device which offers the most bang for the buck that I'm aware of...everything that 'Made in America' signifies."

See the **PSD:3014** at the Eminence Speaker booth #1171 at InfoComm in Orlando, Florida, June 12-14, or online at www.eminence.com.

Eminence Speaker LLC has specialized in the custom manufacturing of loudspeakers for the world's most recognized professional audio and musical instrument brands since 1966. The company also offers its own Eminence brand of upgrade and replacement loudspeakers for professional audio and musical instrument applications through distribution networks in over 80 countries worldwide. The company has manufacturing operations in Eminence, KY and Dongguan, China. Most recently, Eminence added an enclosure manufacturing operation at its Dongguan location to provide its OEM customers with turnkey professional audio systems, musical instrument amplifiers, and related products. More information about the company can be found on its website at www.eminence.com
