

Renkus-Heinz, Inc. Headquarters, Foothill Ranch, California, USA

Working together, there's no problem we can't solve, no schedule we can't meet, no project we can't take to a higher level of excellence, from the White House to the Olympic SuperDome, from corner churches to major metropolitan concert halls. Much as we love technology, our greatest satisfaction comes through helping people communicate through music, dance, theater, or the power of a new idea brilliantly expressed. When we make those kinds of connections, there's nothing more exciting – or more powerful.

Here are some of the unique Renkus-Heinz technologies we use in our loudspeaker systems:

Patented CoEntrant Topology integrates midrange and high frequency drivers into wide-band point sources.

Complex Conic Topology, the first new approach to horn design in decades has proven its superior performance worldwide.

TRAP (TRue Array Principle) design aligns acoustic centers so loudspeaker clusters produce coherent output.

Reference Point Array engineering optimizes the entire signal chain from line level to listener for unprecedented performance.
