

TTL12-S/WP

PASSIVE SUBWOOFER

DESCRIPTION

The TTL12-SWP is an extremely compact high power subwoofer designed to compliment the TTL31-WP Speaker System for a variety of professional indoor or outdoor applications. Based around a band pass design using a newly designed 4" voice coil vented neodymium 12" woofer, it features lightweight, high force, neodymium magnet assembly, incredibly linear frequency response characteristics, the highest power handling of any comparable 12-inch transducer, the lower power compression.

A fully optimised T-pole design generate the minimum amount of flux modulation, the unique dual-forced air venting system guarantee a very efficient voice coil ventilation for minimum power compression and higher power handling.

Connections to the amplifier are made through a watertight multi-pole connector IP67. The grille is in custom perforated aluminum with open-cell fibers and water repellent woven fabric backing.

The cabinet is constructed of multi-ply baltic birch plywood and finished in a very resistant, textured, polyurea black paint. The mechanical suspension system is in high quality steel, very precise and easy to use. The suspension system is directly connected to the aluminum sides of the cabinet.
