

570

HI-Z INPUT

HIGHLIGHTS ■

PREAMP WITH UP TO 68 DB OF GAIN

FULLY VARIABLE IMPEDANCE CONTROL FROM 150 Ω -3 K Ω

+48V PHANTOM POWER FOR CONDENSER MICS

The dbx 570 is a high-quality variable impedance microphone preamplifier in a 500 Series format module. Purpose built to offer a wide range of tonal color, the 570 can bring fresh sonic possibilities and new life to many microphones. First and foremost, the 570 is a high-quality preamplifier that delivers pristine performance suitable for a variety of applications. Up to 68 dB of gain is possible with the additional benefit of variable input impedance. "Z" is the symbol for impedance. High Pass and Low Pass filters offer additional control and signal shaping choices. LME49720 op-amps ensure low noise and wide dynamic range. The 570 is a powerful tool that will broaden your microphone's tonal scope and provide many years of valuable service.

500 Series are a family of processing modules for use in studio, live sound and mobile recording applications. Because they are compact, portable, and highly modular, they are a perfect choice for adding precise tools to your rig without spending a fortune. They also offer excellent features, control, sound quality and the highly sought-after warmth and usability of analog signal processing.

KEY MESSAGES ■

LEGENDARY PERFORMANCE

The new dbx 500 Series modules are based on heritage dbx technologies that are still in use in major studios worldwide today. Examining the original schematics and components, the 500 Series offers users the sound quality that they are used to on dbx analog products, with upgrades for reliability, ease of use, and component quality.

MODULAR + PORTABLE

500 Series modules offer the exactly the control and processing that you need to shape your sound perfectly. With flexible power and transport options, you can select the modules you need and use them with a variety of rack mounted and standalone power units from dbx. All 500 Series modules and power units are also compatible with other manufacturers' 500 Series products.

IN THE BOX ■

dbx 570

AFFORDABILITY

A customized lunchbox processing system shouldn't break the bank. dbx 500 Series modules offer the processing and quality you need at an affordable price point.

TRY IT FOR YOURSELF ■

Pass signal through the unit and experiment with different settings.
