

Choosing a Display

eBeam Edge has been tested on many different TVs in different situations, and the Edge delivers the same great performance on a display as it does with a projector. Due to differences in TV construction, performance can vary slightly from display to display, but most modern displays are fully compatible with eBeam.

Recommended Display Specifications

Resolution: 1080p (1920 x 1080 px)

Illumination: LED backlit LCD**

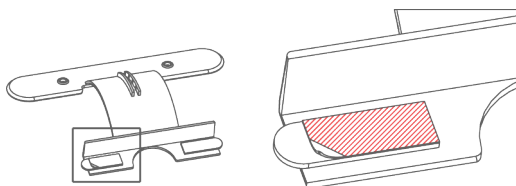

Size: 40" to 80"

Bezel Depth: <1/4" (6.35mm)

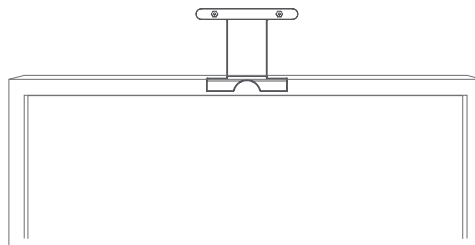

**It is important that the display is LED backlit to keep the temperature of the display surface close to room temperature. Plasma TVs and older LCD TVs are not ideal for use with eBeam Edge.

Getting Started

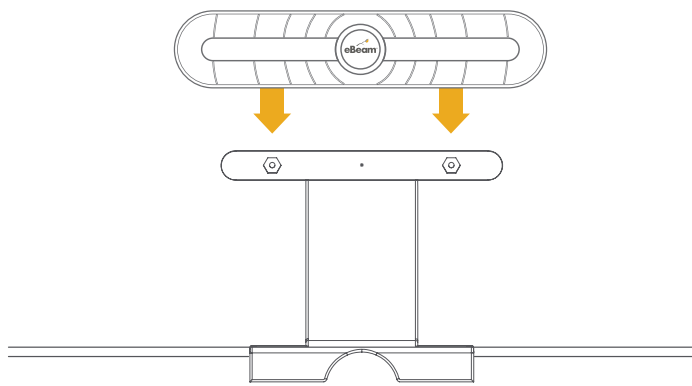

- 1 Remove the LCD bracket from the packaging and remove the paper from the double sided adhesive as shown:

- 2 Install the LCD bracket on the top of the display near the center as shown in the figure to the right. Press and hold the bracket firmly to the TV frame to ensure the adhesive sticks. (It can be removed from the TV by pulling the adhesive tabs parallel to the TV frame.)

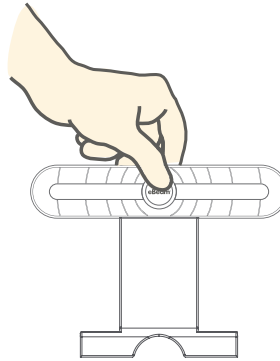

- 3 Attach the eBeam receiver to the bracket using the magnetic mounts on the bracket.

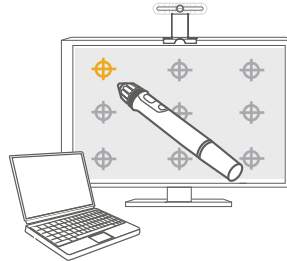

Getting Started (continued)

- 4 Pinch the eBeam to press the center button on the eBeam Edge to invoke calibration.

- 5 Calibrate the display and you're ready to start using your eBeam Edge!
