

Reveal X is ideally suited to re-mix monitoring for Djs. Stereo re-mix monitoring requires the same standard of accuracy as any other music recording, and many Djs use the Tannoy Reveal for this reason. Now you can have the same quality with the Reveal X and benefit from increased sound pressure levels, which really convey the emotion of dance music.

The Tannoy Reveal X is a dedicated centre channel monitor in a Reveal 5.1 surround system. A low profile is necessary for many installations, but it is critical to maintain the same quality when panning across left, centre and right. The Reveal X therefore uses the same drive units as Reveal to ensure consistency of sound quality, whilst doubling up on the mid-bass unit gives it greater power handling. Ideal for the extra level the centre channel often needs to achieve.

PRELIMINARY SPECIFICATIONS

System Type	Optimized bass reflex cabinet
Frequency Response +/-3 dB	65 Hz - 20 kHz
Recommended Amplifier Power	60 - 150 Watts into 8 Ohms
Power Handling	Average: 50 Watts rms Programme: 150 Watts rms
Nominal Impedance	8 Ohms
Sensitivity	90 dB
Distortion	< 0.8%
Crossover Frequency	2.7 kHz
Drive Units	2 x Tannoy shielded 6.5" bass driver & 1" soft dome tweeter
Internal Volume	19 litres
Cabinet Construction	40 mm MDF front baffle, 16 mm high density particle board, internal steel plate for magnetic shielding
Finish	Red satin finish front, grey sueded vinyl sides and back
Dimensions	8.3" x 20.8" x 10.25" - 210 mm x 528 mm x 260 mm
System Weight	29.3 lbs - 13.3 kg

Reveal X

APPLICATIONS

- Home recording
- Project studios
- Music studios
- Mobile recording studios
- Broadcast
- Post production
- Audio visual

FEATURES

- High power handling
- Curved front baffle to reduce diffraction
- Magnetically shielded
- Consistent tonal balance and frequency response
- Twin mid/bass units
- Stylish design
- Tannoy professional quality and accuracy
