## MADE IN THE USA

## Perfect for...

- Indoor \& Outdoor Events
- Schools \& Universities
- Military Training \& Ceremonies
- Sporting Events
- Graduations
- Auditoriums
- Assemblies
- House of Worship
- Parks and Recreation
- Auctions
- Fitness Centers
- Parades \& Community Celebrations
- Ceremonies
- Rental
- Public Gatherings
- Weddings
- and more!

## Liberty Platinum

- Reaches crowds up to $1,500+$
- 117 dB of clear sound
- 125W AC mode / 100W DC mode
- Up to two built-in wireless receivers
- Standard built-in Bluetooth
- Optional built-in CD/MP3 combo player
- Two universal mic input jacks
- 3.5 mm AUX line input
- Built-in rechargeable batteries operate 6 - 8 hours on a single charge
- One 10 " woofer
- One ceramic compression driver
- External speaker output powers optional Liberty Platinum unpowered companion speaker

(LIB-8000CU2 Back Panel)

## Q: How does the AIR wireless connection work?

A: Simple! An 8000X, 8000XU1, and 8000XU2 (Liberty \& MegaVox) include a built-in transmitter - as designated by the $X$. This transmitter operates on the $902-928 \mathrm{MHz}$ frequency, with 100 user-selectable channels. The AIR wireless companion speakers have a built-in receiver which, when set to the same channel as the transmitter, picks up the audio signal.

## Q: Can I use multiple AIR companion speakers in one set up?

A: Yes, absolutely. Any 8000X, 8000XU1, or 8000XU2 can transmit to an unlimited number of AIR wireless companion speakers. All units should be set to the same frequency to receive signal. When setting up your arrangement, be sure to point the systems facing the same direction pointing the systems directly at one another may cause distortion. AIR units can be placed 150 feet (or more in ideal conditions) from the transmitting main unit.

Q: The battery in my AIR is dead/I am experiencing interference on all channels. Can I connect with a cable instead of the wireless connection? A: Yes! All AIR units have what we call 'Wired Mode,' which allows the AIR wireless companion speaker to be used just like an unpowered wired companion speaker. Power and audio signal are sent from the main unit to the AIR companion speaker with a cable. Simply power off the companion speaker, flip the switch into 'Wired Mode,' plug in your speaker cable (SC50 NL for Liberty, SC-50 for MegaVox), and the main unit will power the companion.

## Q: What is the range of the AIR wireless companion speaker?

A: Each AIR can be placed up to 150 feet from the main unit transmitter. In ideal conditions, you can place the systems further, however, be aware of physical latency and/or interference. If you are using multiple AIR systems, be sure to center the main unit between all AIR companions.

Q: I am experiencing interference with my AIR wireless companion, what can I do?
A: Oh no! You have a few options. First, try to change the channel. There are 100 channels to choose from, so be sure to try various frequencies to find a clear channel. You should also double check that your speakers are close enough together to have a strong signal. Be sure all your batteries are fully charged. Additionally, verify your inputs all have a clear signal (such as a wireless microphone, cables, and Bluetooth). Lastly, you can try adjusting the external antennas for a better connection. These fixes may not work for everyone, as there are occasional signals which cannot be avoided (for example being close to a high-power cell tower). In this situation, you can use your AIR companion in 'Wired Mode'. If none of these fixes work, please call us. We are happy to help!

Q: Since the Anchor Audio Assistive Listening Devices are also on 902 928 MHz , can they work together to create a simple and reliable ADA compliant sound system?
A: Actually, yes! An 8000X, 8000XU1, and 8000XU2 (Liberty \& MegaVox) will transmit to the AIR companion speakers as well as the ALB-9000 Assistive Listening beltpack(s). Since all systems are shipped out by default on the 902.000 channel, simply power on your transmitter and receivers (beltpacks and AIR wireless companion), and you instantly have an ADA compliant sound system. Did you know that ADA requirements mandate compliant assistive listening systems for any theater using audio amplification or with a capacity of at least 50 audience members? Try this set up for the easiest solution.
