

# FOAM SPEAKER PLATFORMS, MEDIUM ASP3011 | 12830

Will accommodate studio monitors up to 10.5" in width and 12.5" in depth.

Dense foam absorbs vibrations and stabilizes frequencies.

Two included wedges (per base platform) allow you to customize the angle of your speakers.

## FEATURES AND BENEFITS

By decoupling studio monitors from their workspace, the ASP3011 isolates the true tone and frequency range of playback recordings. Without the use of On-Stage Acoustic Speaker Platforms, studio monitors build-up bass frequencies on hard surfaces; creating the semblance of a low-end in the mix. By creating separation between the speakers and the work surface with these durable foam wedges, studio engineers will enjoy a more accurate audio picture of their recordings. The ASP3011 will accommodate studio monitors up to 10.5" in width and 12.5" in depth. Packaged and sold in pairs.

Also available: the ASP3001 which will accommodate studio monitors up to 6.5" in width and 11.5" in depth, and the ASP3021 which will accommodate studio monitors up to 15.25" in width and 11" in depth.
