

MVX150 Series

VOX is proud to announce the arrival of the MVX150 Series, its new flagship amps equipped with Nutube, the next-generation vacuum tube. Both the MVX150 head and combo feature NuTube technology in both the pre-amp and power amp sections, generating 150 watts of versatile tube tone.

The MVX150 series is the culmination of NuTube technology. In order to fully express the potential of this revolutionary technology, both the pre-amp and power amp sections feature a Nutube. The newly designed power amp uses NuPower technology, and attains sound quality and stunning power that surpasses conventional tube amps. The two-channel design covers a wide range of sounds from clean to high-gain, and everything in between. The MVX150 also features useful functionality such as a WET ONLY output for the on-board reverb and effects send/return, allowing you to easily set up your own wet/dry rig with an additional speaker cabinet. Additionally, the MVX150C1 specially features a UK-made Celestion Redback speaker that covers a broad range of frequencies and can handle the high output of the MVX150.

150-watt amp featuring a Nutube vacuum tube in both the pre-amp and power amp sections

Two-channel design covers a wide range of tones; Bias adjustment knob

Each channel provides EQ as well as various modes that provide a wide array of tones

12" Celestion Redback speaker in Combo; EMULATED LINE OUT allows for direct-line recording

High-quality, on-board digital reverb; WET ONLY output lets you easily set up a wet/dry rig

BC112-150 extension cabinet available for MVX150H & MVX150C1
