# 1. GETTING STARTED

## What's In The Box?

- 1 x Wink™ LED Moving Head Fixture
- 1 x Ever-So-Handy Power Cord
- 1 x Mounting Bracket
- This Lovely User Manual

## Getting It Out Of The Box

Congratulations on your purchase of Wink™, your new eye of the storm LED moving head fixture! Now that you've got your Wink™ (*or hopefully Winks*), you should carefully unpack the box and check the contents to ensure that all parts are present and in good condition. If anything looks as if it has been damaged in transit, notify the shipper immediately and keep the packing material for inspection. Again, please save the carton and all packing materials. If a fixture must be returned to the factory, it is important that the fixture be returned in the original factory box and packing.

## Powering Up!

All fixtures must be powered directly off a switched circuit and **cannot be run off a rheostat (variable resistor) or dimmer circuit, even if the rheostat or dimmer channel is used solely for a 0% to 100% switch.**

*AC Voltage Switch* - Not all fixtures have a voltage select switch, so please verify that the fixture you receive is suitable for your local power supply. See the label on the fixture or refer to the fixture's specifications chart for more information. A fixture's listed current rating is its average current draw under normal conditions. Check the fixture or device carefully to make sure that if a voltage selection switch exists that it is set to the correct line voltage you will use.

**Warning! Verify that the voltage select switch on your unit matches the line voltage applied. Damage to your fixture may result if the line voltage applied does not match the voltage indicated on the voltage selector switch. All fixtures must be connected to circuits with a suitable Ground (Earthing).**

## Getting A Hold Of Us

**If something is wrong, please just visit our website at [www.blizzardlighting.com/](http://www.blizzardlighting.com/) support and open a support ticket. We'll be happy to help, honest.**

# SAFETY INSTRUCTIONS

Please read these instructions carefully. They include important information about the installation, usage and maintenance of this product.

- Please keep this User Guide for future use. If you sell the unit to someone else, be sure that they also receive this User Guide.
- ALWAYS make sure that you are connecting to the proper voltage, and that the line voltage you are connecting to is not higher than that stated on the decal or rear panel of the fixture.
- This product is intended for indoor use only.
- To prevent risk of fire or shock, do not expose fixture to rain or moisture.
- Make sure there are no flammable materials close to the unit while operating.
- The unit must be installed in a location with adequate ventilation, at least 20in (50cm) from adjacent surfaces. Be sure that no ventilation slots are blocked.
- ALWAYS disconnect from the power source before servicing or replacing fuse and be sure to replace with same fuse size and type.
- ALWAYS secure fixture using a safety chain. NEVER carry the fixture by its head. Use its carrying handles.
- DO NOT operate at ambient temperatures higher than 104°F (40°C).
- In the event of a serious operating problem, stop using the unit immediately. NEVER try to repair the unit by yourself. Repairs carried out by unskilled people can lead to damage or malfunction. Please contact the nearest authorized technical assistance center. Always use the same type spare parts.
- NEVER connect the device to a dimmer pack.
- Make sure the power cord is never crimped or damaged.
- Never disconnect the power cord by pulling or tugging on the cord.
- Avoid direct eye exposure to the light source while it is on.

**Caution!** There are no user serviceable parts inside the unit. Do not open the housing or attempt any repairs yourself. In the unlikely event your unit may require service, please open a support ticket at [www.blizzardlighting.com/support](http://www.blizzardlighting.com/support).

## 2. MEET WINK™

### MAIN FEATURES

- 1\* 60W RGBW high power 4-in-1 LED
- 4-segment RGB colored ring with 8\* 0.5W RGB 3-in-1 LEDs
- Individual pixel and LED ring control
- 5-45 degree zoomable beam angle
- Blazing fast 540°/270° + infinite pan/tilt
- Built-in auto and sound active programs
- Multiple static color presets and virtual color wheel
- Variable electronic dimming & strobe effects (1-20Hz)
- Flicker-free constant-current LED driver
- 3-pin male input and 3-pin female output
- PowerCON™ compatible AC power In/Out connectors
- Protocol: USITT DMX-512
- 19/26/35-channel DMX modes
- 2.4 inch TFT color LCD display panel with 4x touch sensitive buttons

### DMX Quick Reference (19/26/35-Channel Modes)

| CH. | Basic (19ch)         | CH. | Standard (26ch)      | CH. | Extended (35ch)      |

**Figure 1: Wink™ Pin-Up Picture**

**Figure 2: The Rear Connections**

### 3. SETUP

Before replacing a fuse, disconnect the power cord.  
ALWAYS replace with the same type and rating of fuse.

#### Fuse Replacement

Wink™ utilizes a high-output switch-mode power supply with an internal fuse. Under normal operating conditions, it should not require replacement. Should the fuse require replacement, please contact Blizzard Lighting for instructions, or to return your unit for service.

#### Connecting A Bunch of Wink™ Fixtures

You will need a serial data link to run light shows using a DMX-512 controller or to run shows on two or more fixtures set to sync in master/slave operating mode. The combined number of channels required by all the fixtures on a serial data link determines the number of fixtures the data link can support.

Fixtures on a serial data link must be daisy chained in one single line. Also, connecting more than 32 fixtures on one serial data link without the use of a DMX optically-isolated splitter may result in deterioration of the digital DMX signal. The maximum recommended cable-run distance is 500 meters (1640 ft). The maximum recommended number of fixtures on a serial data link is 32 fixtures.

#### Data/DMX Cabling

To link fixtures together you'll need data cables. You should use data-grade cables that can carry a high quality signal and are less prone to electromagnetic interference.

For instance, Belden© 9841 meets the specifications for EIA RS-485 applications. Standard microphone cables will "probably" be OK, but note that they cannot transmit DMX data as reliably over long distances. In any event, the cable should have the following characteristics:

*2-conductor twisted pair plus a shield*  
*Maximum capacitance between conductors – 30 pF/ft.*  
*Maximum capacitance between conductor & shield – 55 pF/ft.*  
*Maximum resistance of 20 ohms / 1000 ft.*  
*Nominal impedance 100 – 140 ohms*

## Cable Connectors

Cables must have a male XLR connector on one end and a female XLR connector on the other end. (Duh!)

**A Word on Termination:** DMX is a resilient communication protocol, however errors still occasionally occur. Termination reduces signal errors, and therefore best practices include use of a terminator in all circumstances. If you are experiencing problems with erratic fixture behavior, especially over long signal cable runs, a terminator may help improve performance.

**To build your own DMX Terminator:**  
Obtain a 120-ohm, 1/4-watt resistor, and wire it between pins 2 & 3 of the last fixture. They are also readily available from specialty retailers.

**CAUTION:** Do not allow contact between the common and the fixture's chassis ground. Grounding the common can cause a ground loop, and your fixture may perform erratically. Test cables with an ohm meter to verify correct polarity and to make sure the pins are not grounded or shorted to the shield or each other.

### 3-Pin??? 5-Pin??? Huh?!?

If you use a controller with a 5-pin DMX output connector, you will need to use a 5-pin to 3-pin adapter. They are widely available over the internet and from specialty retailers. If you'd like to build your own, the chart below details a proper cable conversion:

| Conductor                              | 3-Pin Female (Output) | 5-Pin Male (Input) |
|--|-----------------------|--------------------|
| Ground/Shield                          | Pin 1                 | Pin 1              |
| Data 1- (Primary Data Link)            | Pin 2                 | Pin 2              |
| Data 1+ (Primary Data Link)            | Pin 3                 | Pin 3              |
| Data 2- (Optional Secondary Data Link) | Pin 4                 | Pin 4              |
| Data 2+ (Optional Secondary Data Link) | Pin 5                 | Pin 5              |

## Take It To The Next Level: Setting Up DMX Control

**Step 1:** Connect the male connector of the DMX cable to the female connector (output) on the controller.

**Step 2:** Connect the female connector of the DMX cable to the first fixture's male connector (input). *Note:* It doesn't matter which fixture address is the first one connected. We recommend connecting the fixtures in terms of their proximity to the controller, rather than connecting the lowest fixture number first, and so on.

**Step 3:** Connect other fixtures in the chain from output to input as above. Place a DMX terminator on the output of the final fixture to ensure best communication.

## Installation

The fixture can be installed on the floor resting on its rubber feet, or mounted on truss.

- Choose a suitable place to put or hang the equipment when installing. When hanging the fixture, use the included clamp mounting brackets with suitable clamps to properly support the weight of the fixture.
- When installing the equipment, ensure that no flammable or explosive materials are within 1/2 meter distance.
- Please ask professionals to install the equipment. Any improper installation can cause personal injury or material damage.
- The equipment must be placed in a ventilated area, at least 50 cm from the ground, and always ensure that the vents are not clogged.
- Mount the fixture using suitable type clamps. The clamp should be rated to hold at least 10x the fixture's weight to ensure structural stability. Do not mount to surfaces with unknown strength, and ensure properly "rated" rigging is used when mounting fixtures overhead.

**WARNING:** With the exception of when the fixture is positioned on the floor, a safety cable must always be used. It must be securely fixed to the support structure, and then connected to the fixing point on the bottom of the base.

# 4. OPERATING ADJUSTMENTS

## The Control Panel

All the goodies and different modes possible with the Wink™ are accessed by using the control panel on the front of the fixture. There are 4 control buttons to the right of the LCD display which allow you to navigate through the various control panel menus.

### <MODE>

Is used to navigate to the previous higher-level menu item.

### <ENTER>

Is used to select and confirm/store the current selection.

### <UP>

Scrolls through menu items and numbers in ascending order.

### <DOWN>

Scrolls through menu items and numbers in descending order.

The control panel display shows the menu items you select from the menu map on page #11. When a menu function is selected, the display will show immediately the first available option for the selected menu function. To select a menu item, press **<ENTER>**.

Use the **<UP>** and **<DOWN>** buttons to navigate the menu options. Press the **<ENTER>** button to select the menu function currently displayed, or to enable a menu option. To return to the previous option or menu without changing the value, press the **<MODE>** button.

## DMX Mode

*Allows the unit to be controlled by any universal DMX controller.*

### Set the Starting DMX Address:

- 1.) Navigate the main menu to reach **DMX Settings**, press **<ENTER>**.
- 2.) Highlight **Set DMX Address**, and press **<ENTER>**.
- 3.) Use the **<UP/DOWN>** buttons to select a DMX channel from **001-512**.
- 4.) Press the **<ENTER>** button to confirm.

### Select the DMX Channel Mode:

- 1.) Navigate the main menu to reach **DMX Settings**, press **<ENTER>**.
- 2.) Highlight **Channel Mode**, and press **<ENTER>**.
- 3.) Use the **<UP/DOWN>** buttons to select **Extended (35CH)**, **Standard (26CH)** or **Basic (19CH)**.
- 4.) Press the **<ENTER>** button to confirm your selection.

### DMX Mode:

- 1.) Navigate the menu until you reach **Run Mode**, press **<ENTER>**.
- 2.) Use the **<UP/DOWN>** buttons to highlight **DMX**, press **<ENTER>**.
- 3.) In DMX mode, the starting DMX channel is shown prominently in the center of the screen. If a DMX signal is not present or becomes interrupted, the display will flash until the DMX signal is present.

### Slave Mode:

- 1.) Navigate the menu until you reach **Run Mode**, press **<ENTER>**.
- 2.) Use the **<UP/DOWN>** buttons to highlight **Slave**, press **<ENTER>**.
- 3.) The fixture is now in Slave Mode, and will follow the Master Fixture (the first fixture in the DMX chain.)
- 4.) In Slave Mode, the starting DMX channel is shown prominently in the center of the screen. If a DMX signal is not present or becomes interrupted, the display will flash until the DMX signal is present.

## Auto, Sound Active, & Manual Adjustments:

*Allows a single or Master/Slaved units to run factory installed programs.*

### Auto Mode:

- 1.) Navigate the main menu until you reach **Run Mode**, press **<ENTER>**.
- 2.) Use the **<UP/DOWN>** buttons to highlight **Auto Program 1** or **2**.
- 3.) Press the **<ENTER>** button to confirm your selection.

### Sound Active Mode:

- 1.) Navigate the main menu until you reach **Run Mode**, press **<ENTER>**.
- 2.) Use the **<UP/DOWN>** buttons to highlight **Sound Active 1** or **2**.
- 3.) Press the **<ENTER>** button to confirm your selection.

### Static Mode:

- 1.) Navigate the main menu until you reach **Run Mode**, press **<ENTER>**.
- 2.) Use the **<UP/DOWN>** buttons to select **Static Setup**.
- 3.) Manual adjustments ranging from **0-255** can be made to any available static mode submenu option.

## System Utilities

*Other utilities found within the control panel menu.*

### Display Timeout:

- 1.) Navigate the main menu until you reach **Utilities**, press **<ENTER>**.
- 2.) Highlight **Disp. Setting <ENTER>**, then **Display Timeout <ENTER>**.
- 3.) Set the timer to shut off the display after 2-60 minutes of inactivity.

### Display Invert:

- 1.) Navigate to **Utilities <ENTER>**, then **Disp. Setting <ENTER>**.
- 2.) Use the **<UP/DOWN>** buttons to select **Display Invert**, press **<ENTER>**.
- 3.) From here, you can select **Normal** or **Invert** to flip the display.

### Pan/Tilt Invert:

- 1.) Navigate to **Utilities <ENTER>**, then **Pan Invert** or **Tilt Invert <ENTER>**.
- 2.) Use the **<UP/DOWN>** buttons to highlight **Normal**, or **Invert**.
- 3.) Press the **<ENTER>** button to confirm.

### Calibration Settings:

- 1.) Navigate to **Utilities <ENTER>**, then **Calibration <ENTER>**.
- 2.) Highlight either **Pan**, **Tilt**, or **Zoom**, and press **<ENTER>**.
- 3.) Make any adjustments needed, then press **<ENTER>** to confirm.

### Fixture Test:

- 1.) Navigate the main menu until you reach **Utilities**, press **<ENTER>**.
- 2.) Use the **<UP/DOWN>** buttons to select **All** (motors and LEDs), **Pan & Tilt** (motors), **LED** (LEDs only), or **Ring LED** (ring LEDs only.)
- 3.) Press the **<ENTER>** button to confirm your selection.

### Motor/Factory Reset:

- 1.) Navigate to **Utilities <ENTER>**, then **Motor** or **Factory Reset <ENTER>**.
- 2.) Use the **<UP/DOWN>** buttons to highlight **Yes** or **No**.
- 3.) Press the **<ENTER>** button to confirm.

### Runtime Info

- 1.) Navigate to **Utilities <ENTER>**, then **Time Info <ENTER>**.
- 2.) From here you can view current **Power On** time, and **Last Run** hours.

### Software

- 1.) Navigate to **Utilities <ENTER>**, then **Software <ENTER>**.
- 2.) From here you can view the installed software version information.

## DMX Values In-Depth (19/26/35-Channel Modes)

| Basic Mode<br>19CH | Standard<br>21CH | Extended<br>35CH | Value   | What it does  |
|--------------------|------------------|------------------|---|---|

# 5. APPENDIX

## A Quick Lesson On DMX

DMX (aka DMX-512) was created in 1986 by the United States Institute for Theatre Technology (USITT) as a standardized method for connecting lighting consoles to lighting dimmer modules. It was revised in 1990 and again in 2000 to allow more flexibility. The Entertainment Services and Technology Association (ESTA) has since assumed control over the DMX512 standard. It has also been approved and recognized for ANSI standard classification.

DMX covers (and is an abbreviation for) Digital MultipleXed signals. It is the most common communications standard used by lighting and related stage equipment.

DMX provides up to 512 control "channels" per data link. Each of these channels was originally intended to control lamp dimmer levels. You can think of it as 512 faders on a lighting console, connected to 512 light bulbs. Each slider's position is sent over the data link as an 8-bit number having a value between 0 and 255. The value 0 corresponds to the light bulb being completely off while 255 corresponds to the light bulb being fully on.

DMX data is transmitted at 250,000 bits per second using the RS-485 transmission standard over two wires. As with microphone cables, a grounded cable shield is used to prevent interference with other signals.

There are five pins on a DMX connector: a wire for ground (cable shield), two wires for "Primary" communication which goes from a DMX source to a DMX receiver, and two wires for a "Secondary" communication which goes from a DMX receiver back to a DMX source. Generally, the "Secondary" channel is not used so data flows only from sources to receivers. Hence, most of us are most familiar with DMX-512 as being employer over typical 3-pin "mic cables," although this does not conform to the defined standard.

DMX is connected using a daisy-chain configuration where the source connects to the input of the first device, the output of the first device connects to the input of the next device, and so on. The standard allows for up to 32 devices on a single DMX link.

Each receiving device typically has a means for setting the "starting channel number" that it will respond to. For example, if two 6-channel fixtures are used, the first fixture might be set to start at channel 1 so it would respond to DMX channels 1 through 6, and the next fixture would be set to start at channel 7 so it would respond to channels 7 through 12.

The greatest strength of the DMX communications protocol is that it is very simple and robust. It involves transmitting a reset condition (indicating the start of a new "packet"), a start code, and up to 512 bytes of data. Data packets are transmitted continuously. As soon as one packet is finished, another can begin with no delay if desired (usually another follows within 1 ms). If nothing is changing (i.e. no lamp levels change) the same data will be sent out over and over again. This is a great feature of DMX -- if for some reason the data is not interpreted the first time around, it will be re-sent shortly.

Not all 512 channels need to be output per packet, and in fact, it is very uncommon to find all 512 used. The fewer channels are used, the higher the "refresh" rate. It is possible to get DMX refreshes at around 1000 times per second if only 24 channels are being transmitted. If all 512 channels are being transmitted, the refresh rate is around 44 times per second.

In summary, since its design and evolution in the 1980's DMX has become the standard for lighting control. It is flexible, robust, and scalable, and its ability to control everything from dimmer packs to moving lights to foggers to lasers makes it an indispensable tool for any lighting designer or lighting performer.

## Keeping Your Wink™ As Good As New

The fixture you've received is a rugged, tough piece of pro lighting equipment, and as long as you take care of it, it will take care of you. That said, like anything, you'll need to take care of it if you want it to operate as designed. You should absolutely keep the fixture clean, especially if you are using it in an environment with a lot of dust, fog, haze, wild animals, wild teenagers or spilled drinks.

Cleaning the optics routinely with a suitable glass cleaner will greatly improve the quality of light output. Keeping the fans free of dust and debris will keep the fixture running cool and prevent damage from overheating.

In transit, keep the fixtures in cases. You wouldn't throw a prized guitar, drumset, or other piece of expensive gear into a gear trailer without a case, and similarly, you shouldn't even think about doing it with your shiny new light fixtures.

Common sense and taking care of your fixtures will be the single biggest thing you can do to keep them running at peak performance and let you worry about designing a great light show, putting on a great concert, or maximizing your client's satisfaction and "wow factor." That's what it's all about, after all!

## Returns (Gasp!)

We've taken a lot of precautions to make sure you never even have to worry about sending a defective unit back, or sending a unit in for service. But, like any complex piece of equipment designed and built by humans, once in a while, something doesn't go as planned. If you find yourself with a fixture that isn't behaving like a good little fixture should, you'll need to obtain a Return Authorization (RA).

Don't worry, this is easy. Just go to our website and open a support ticket at [www.blizzardlighting.com/support](http://www.blizzardlighting.com/support), and we'll issue you an RA. Then, you'll need to send the unit to us using a trackable, pre-paid freight method. We suggest using USPS Priority or UPS. Make sure you carefully pack the fixture for transit, and whenever possible, use the original box & packing for shipping.

When returning your fixture for service, be sure to include the following:

- 1.) Your contact information (Name, Address, Phone Number, Email address).
- 2.) The RA# issued to you
- 3.) A brief description of the problem/symptoms.

We will, at our discretion, repair or replace the fixture. Please remember that any shipping damage which occurs in transit to us is the customer's responsibility, so pack it well!

## Shipping Issues

**Damage incurred in shipping is the responsibility of the shipper, and must be reported to the carrier immediately upon receipt of the items. Claims must be made within seven (7) days of receipt.**

## Tech Specs!

| <b>Weight &amp; Dimensions</b> |   |
|--------------------------------|---|
| Width                          | 8.3 inches (210 mm)   |
| Depth                          | 6.5 inches (164 mm)   |
| Height                         | 12.1 inches (306.6 mm)  |
| Weight                         | 12.5 lbs. (5.7 kg)  |
| <b>Power</b>                   |   |
| Operating Voltage              | 100V-240VAC, 50-60Hz  |
| Power Consumption              | 110W, 1.44A, PF: .66  |
| <b>Light Source</b>            |   |
| LED                            | 1x 60W RGBW 4-in-1 LED<br>8* 0.5W RGB 3-in-1 LEDs (Ring)                      |
| <b>Thermal</b>                 |   |
| Max. Operating Temp.           | 104 degrees F (40 degrees C) ambient  |
| <b>Movement Range</b>          |   |
| Pan                            | 540 degree (8-16 bit resolution) / Infinite Pan                               |
| Tilt                           | 270 degree (8-16 bit resolution) / Infinite Tilt                              |
| <b>Control</b>                 |   |
| Protocol                       | USITT DMX-512   |
| DMX Channels                   | 19/26 or 35-channel DMX modes   |
| Input                          | 3-pin XLR Male  |
| Output                         | 3-pin XLR Female  |
| Other Operating Modes          | Standalone, Master/Slave, Auto, Sound Active                                  |
| <b>Warranty</b>                | 2-year limited warranty, does not cover malfunction caused by damage to LEDs. |

## Troubleshooting

| <b>Symptom</b>                                  | <b>Solution</b>  |
|---|--|
| Fixture Auto-Shut Off                           | Check the fan in the fixture. If it is stopped or moving slower than normal, the unit may have shut itself off due to high heat. This is to protect the fixture from overheating. Clear the fan of obstructions, or return the unit for service. |
| Beam is Dim                                     | Check optical system and clean excess dust/grime.  |
| No Power  | Check fuse, AC cord and circuit for malfunction.   |
| Blown Fuse                                      | Check AC cord and circuit for damage, verify that moving parts are not restricted and that unit's ventilation is not obstructed  |
| Slow Movement                                   | Check that speed channels are set appropriately.   |
| Fixture Not Responding / Responding Erratically | Make sure all connectors are seated properly and securely. Use Only DMX Cables. Install a Terminator. Check all cables for defects. Reset fixture(s).  |

## Dimensional Drawings

## Photometric Data

| Distance:         | 1m            | 2.5m             | 5m              |
|-------------------|---------------|------------------|-----------------|
| 5° beam diameter  | 3.5" (9 cm)   | 8.9" (22.5 cm)   | 17.7" (45 cm)   |
| 45° beam diameter | 31.9" (81 cm) | 79.7" (202.5 cm) | 159.5" (405 cm) |

### Luminous Intensity:

| Beam | 1m lux | 1m fc | 2.5m lux | 2.5m fc | 5m lux | 5m fc |
|------|--------|-------|----------|---------|--------|-------|
| 5°   | 28,180 | 2,618 | 6,517    | 605.5   | 1,700  | 158   |
| 45°  | 2,458  | 228.3 | 425      | 39.5    | 130    | 12.1  |

**Enjoy your product!  
Our sincerest thanks for your purchase!
