

Genesis® Series GSP-500-HDC MEDIUM PEDALBOARD HARD CASE

The GSP-500-HDC Medium Pedalboard Hard Case from Ultimate Support is a flight ready hard case solution specially designed for your GSP-500-BK pedalboard. We've designed this case to not only protect your precious pedals from the perils of air travel, but also to make life on the road as easy as possible. 4 bolts with rubber feet screw into the bottom of the case and in to your pedalboard. Once you've got your power supply and pedals configured the way you like them, simply screw in these rubber feet, and the base of this heavy duty case will be attached to your GSP-500-BK. Setting your pedalboard up at the venue will be as simple as removing the lid by releasing the durable, recessed latches, and plugging in your guitar and amp cables. Once you're done, replace the lid on the case, and you're ready to head to the next show, whether you're riding in a van, bus, or plane.

Pedalboard
Not Included

Secure Case

Durable, recessed latches keep your GSP-500-HDC firmly locked.

Road Ready Handles

The spring loaded handles stay in out of the way when you don't need them, with an easy to carry rubber grip for when you do.

Construction

This drop tested case has been designed not only to hold your GSP-500-BK, but to protect it from whatever luggage handlers can throw at it, (or throw it at...)

Protective Padding

The angled, protective inner padding is sloped to make room for your pedals, while still helping to hold them in place should they come loose from the pedalboard.

Open Back for Cables

The specially angled edges of this purpose built road case provide ample room for cables to extend out of the road case.
