

ALIGN SERIES EQUALIZER

USER'S GUIDE

INTRODUCTION

Based on the circuit of the esteemed Para Acoustic DI, the Align Equalizer combines our signature, high-graded FET gain stage with powerful tone-shaping EQ that injects richness and balance to any acoustic pickup signal. A 6-band EQ shapes the frequencies we found most useful for improving acoustic guitar pickups with the flexibility needed to cover other acoustic instruments effectively. Multi-instrumentalists can incorporate dedicated EQ pedals for level matching a variety of instruments and tailoring a specific EQ for each one.

GETTING STARTED

1. Power the Equalizer with a 9V power supply or a 9V battery.
2. Plug your guitar into the ¼" input to activate the Equalizer (upper **right hand** side) and a cable into the ¼" output (upper **left hand** side).
3. Adjust the gain using the gain switch. Read section D in this manual for setting your gain to the appropriate level.
4. Plug the ¼" cable into your amp, PA, or next pedal in the signal chain and experiment with the Equalizer.

TOP FEATURES

A. NOTCH

The notch filter is designed to help control feedback. If your guitar begins to feedback, slowly turn the notch control clockwise. The offending frequency will stop instantly when the notch is in the proper position.

B. INSTRUMENT INPUT

The 1/4" input is an unbalanced (mono), all-discrete input. Plugging into the input will activate the Equalizer, therefore, unplugging will turn the system off.

C. 6-BAND EQ

The Equalizer's 6-band EQ controls shape the frequencies we found most useful for improving acoustic guitar pickups with the flexibility needed to cover other acoustic instruments effectively. Use the controls to raise or lower each individual frequency to meet the needs of your instrument or to balance your tone in the room.

D. GAIN

The gain switch was designed to allow for quick, easy adjustments of your input level. This switch ranges between -6dB (half of normal level), 0dB (no change to normal level), and +6dB (twice normal level). This can be used to accommodate for a passive pickup (+6dB), or a pickup that is too hot (-6dB).

E. PHASE

Press this button to invert the phase. Usually, one phase will provide better sound and feedback resistance. With all acoustic instruments it is important to try both phases each time you set up, because phase is relative to your position on the stage.

F. ENGAGE

Press the footswitch to engage the tone shaping tools. When the light is on, all of the controls on the Equalizer are engaged. When the light is off, the whole pedal is true bypassed.

G. HIGH-PASS FILTER

The high-pass filter may be used to attenuate extraneous low frequencies, allowing for an appropriate mix with different instruments, playing situations, and sound

systems. The variable “hpf” switches between 45, 75, and 120Hz.

H. ¼” OUTPUT

The ¼” output is an unbalanced, line level output. You can plug into any amp or device that has a ¼” input. We recommend running into any other LR Baggs Align pedals, DI’s, or the Synapse Personal PA System.

I. VOLUME

The master volume will help you find a balance between your engaged and bypassed signal. It is only active when the engage light is on. Keep in mind that your 6-band EQ controls and gain switch will affect this balance.

SIDE FEATURES

A. DC INPUT

The DC power input is designed for a standard 2mm plug commonly used with effects pedals and “floor-box” products. Most power supplies or multi-power devices designed for musical products may be used. 9VDC recommended with a 12VDC maximum. Plugging in a power supply will activate the Equalizer.

SPECIFICATIONS

1/4" INPUT

Input Impedance: 5.1 Megohms

Preamp Gain: -6dB, 0dB, +6dB

Input Level: -25dBv to +3dBv (0.056Vrms to 1.414Vrms)

EQ

High Pass Filter: 45Hz, 75Hz, 120Hz

Notch: -20dB, sweepable from 40Hz to 300Hz 1/8 octave

85Hz: +/-9dB

350Hz: +/-9dB

700Hz: +/-9dB

1.6kHz: +/-9dB

4.8kHz: +/-9dB

10kHz: +/-9dB

LINE OUTPUT

Output Level: -1.4dBv (0.848Vrms) Unbalanced

Output Impedance: 470 Ohms

POWER

DC Power Consumption: 43mW Max at 9V

DC Current Draw: 4.5mA

Voltage Range: 7.5VDC – 12VDC

Power Supply: 9VDC with 100mA minimum

***IMPORTANT:** polarity Pos (+) on outside, Gnd (-) on center

9V Battery Life: 110 hours

Signal to Noise: 90dB, Unweighted

PHYSICAL CHARACTERISTICS

0.85 Lbs, 5" Length x 3.25" Width x 2" Depth

These specifications may change without notice.
