

UNIVERSAL PROJECTOR POLE - WALL BRACKET

Patent applied for

This One Bracket meets all your installation needs, regardless of the Mount being used - saving you time and money

The Universal Bracket

The Universal Bracket Showing the Extron® Versa® Tool Mounting Holes

Pre-Drilled for all 43 Extron® 1/8th & 1/4 Rack Versa® Tools Modules and all 20 Nigel B Modules. Installing any of these is simple and quick.

The Universal Mounting Bracket can be used on any Flat Surface or any Projector's Pole regardless of the Mount's Manufacturer

ONLY TWO INCHES HIGH NEEDED ON A TYPICAL INSTALLTION

Each Bracket is secured to the Projector's Pole using a Simple "U" Bolt (which we supply). When using two Brackets "side by side" to install both the Amplifier and Power Supply, allows the Projector to sit within two inches of the Ceiling. This reduction in height is achieved by using two sets of offset Bracket holes, keeping the two Brackets on the same plane.

"U" Bolt on Pole
