

new for '02

The Config-u-raxx studio furniture system from Raxxess is a completely modular workstation designed to compliment the modern studio environment.

config-u-raxx

A wide range of components allows a system to be configured to suit any room size and shape, while the new height adjustment system allows any desktop surface to be adjusted from 26" to 31" above the floor. These features make the Config-U-Raxx system just as comfortable for the MIDI composer as it is for the audio engineer.

The Config-U-Raxx line consists of an array of desktop surfaces, side wings and shelves, as well as add-ons such as doors and keyboard trays. Each component can be easily interfaced with any other component in the system, allowing for an almost endless variety of configurations. Future expansion of the system will be just as easy.

Supported by an all steel substructure, this furniture is designed to provide years of trouble-free service and rock-solid performance.

The Config-U-Raxx system is available in maple and ebony fleck finishes with silver T-mold trim. All steel surfaces are coated with an attractive silver hammer tone finish.
