

V SERIES

DRUM MICROPHONES

V KICK

KICK DRUM MIC

Unbeatable punch, impact & flexibility, with four custom voicings to cover any sonic need.

The **V KICK** is the most compact and versatile drum microphone in its class, intended for use with kick (bass) drums or other large drums where low-frequency energy is of the utmost importance. Its **integrated swivel joint** allows for any required mic placement, and its **specialized capsule** provides a sound character tailored specifically for kick drums, which can be further shaped with the **two voicing and HF character switches** on the rear of the mic.

From warm and classic to modern and aggressive, the V KICK gives you any kick drum sound you need.

V BEAT + V CLAMP

SNARE / TOM DRUM MIC + MOUNT

Superior isolation & effortless performance - all with minimal footprint & maximum versatility.

The **V BEAT** is the most compact drum microphone in its class, intended for use with snare or tom drums. Its specialized capsule provides a **highly detailed, extremely natural sound character** on snares or toms of any size, with **amazing off-axis rejection to minimize bleed** from nearby drums and cymbals. Its **ultra-compact design** and **parallel XLR connector & stand mount** give it the smallest footprint in its class, and its **rock-solid swivel mount** allows its angle to be adjusted with great precision – so it can be aimed at almost any part of the drum head to achieve whatever sound character is required.

The V BEAT is at its best when used with the new **V CLAMP** - the fastest, most practical and most compact drum mic mounting system on the market. The V CLAMP adds another axis of vertical movement for even better fine-positioning ability, and keeps the mic securely fastened to your drum rim while adding barely any bulk to the overall footprint.

"The V KICK - WOW. It's soooo solid-sounding on the bottom end. And with the V BEAT, I don't have to force that fat low end out of the snare drum with EQ that always ends up sounding fake."

- Eddie Mapp (FOH, Evanesence)

Robust build. Exceptional sound. The V Series Dynamics.
