NEW 318BTS

THE LEADING BLUETOOTH RECEIVER, NOW IN STEREO Since its introduction, the Switchcraft 318BT has been the first choice of the professional audio industry for its compact design, phantom powered capabilities, and high build quality. The new 318BTS improves on this by offering a stereo output using the included XLR extension cable and updated electronics, all in an even smaller package.

PHANTOM POWER FLEXIBILITY

The 318BTS can run entirely off phantom power. When using the extension cable, power is received from both XLR inputs for improved performance. The device can also be powered via Micro-USB port.

STEREO OR MONO OPERATION

The 318BTS includes a high quality XLR cable for outputting a second channel, while a toggle switch allows the user to easily switch between stereo or summed mono operation.

SWITCHCRAFT QUALITY

The 318BTS is assembled in Chicago in an extremely durable metal housing using high quality components, including Switchcraft XLRs and cables and is designed to handle the most demanding applications.
