

BLUETOOTH AUDIO CONFERENCING

WILLIAMS AV

BLUEPOD™

BLUETOOTH AUDIO CONFERENCING SYSTEMS

The BluePOD™ systems from Williams AV are ready to revolutionize the world of audio and video conferencing with the innovative integration of Bluetooth® technology.

BLUEPOD CONFERENCE MATE

BLUETOOTH AUDIO CONFERENCING SYSTEM

Designed to simplify making conference calls in your meeting rooms with your computer, laptop and mobile phone. Making a conference call is now as simple as tapping the Bluetooth connect button on your device; no special software is needed. Adjusting the volume, muting and connecting is all done on the standard volume control on your device. Using the system setup screens on the embedded web server provides complete setup control and the ability to adjust input gain on each audio source.

BluePOD also allows you to select the speakers and microphones you want to use. It features an integrated mixer with DSP functions, including Acoustic Echo Cancellation. And the mixer includes four inputs (two mic/two line), two line outputs and two 25-watt amplifiers.

BluePOD gets its name from the small pod-shaped enclosure housing the patent-pending B-WAP (Bluetooth wireless access point) transceiver. The B-WAP is equipped with a Bluetooth 4.2 aptX HD long-range transceiver – elevated by a new HD codec standard that supports 24-bit, high-resolution Bluetooth audio. The end result: excellent audio quality, low latency and minimal background noise. The B-WAP provides up to a 100-foot sphere of Bluetooth broadcast coverage in a typical office or educational environment.

This complete audio solution pairs the B-WAP Bluetooth Wireless Access Point with the Conference Mate Controller. It is designed for easy integration into new and/or existing audio system projects.

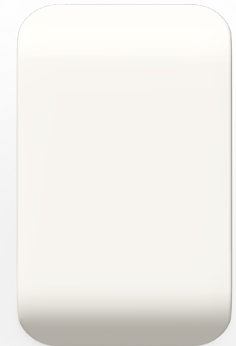

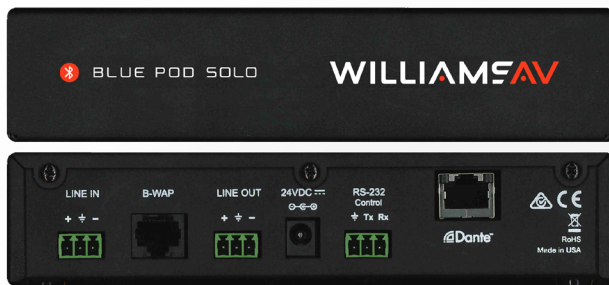

BLUEPOD SOLO | SOLO D

BLUETOOTH AUDIO CONFERENCING SYSTEM

The BluePOD Solo gives integrators the ability to add the B-WAP Bluetooth Wireless Access Point into any existing audio system for total Bluetooth functionality. Simply connect the line-in and line-out from your mixer, and experience all the connectivity of the BluePOD with your existing audio system.

BluePOD Solo D features a Dante network port.

BLUEPOD CONFERENCE MATE BUNDLE

BLUETOOTH AUDIO CONFERENCING SYSTEM

This complete audio conferencing package includes the BluePOD Conference Mate Audio Conferencing System, plus (2) SPK 035 speakers and (2) MIC 104 conference microphones.

AUDIO PRESENTER HUB

PRESENTATION SYSTEM

The Audio Presenter HUB delivers industry first, truly wireless, audio + video connectivity. This system redefines the ease of adding wireless devices to your meeting room presentations. Combine a conference call with a PowerPoint simply by connecting your phone to the Bluetooth (via the included B-WAP Bluetooth Wireless Access Point) and wirelessly connecting your laptop to the room display.
