REA-C1000 Edge Analytics Appliance

Overview

Grab your audience's attention and increase their engagement with intelligent video analytics technology.

Edge Analytics Appliance creates impactful video presentation content that previously would have required significant time, expense, and human resource to produce. With Artificial Intelligence-led technology, the REA-C1000 vastly improves the quality of communication by empowering the presenter to deliver content and to engage their audience like never before.

Note: This product contains pre-installed software and requires the purchase of license keys to activate some functions. After a free 60-day trial period, each feature can be activated permanently through purchase of separate licenses*, providing users with the freedom to customize features based on their individual needs and budget.

Features

Handwriting extraction technology

No matter where the speaker is standing, the handwriting extraction feature ensures that any words and diagrams written on a board or screen remain in full view to the audience — via AR (augmented reality).

Even if the speaker is standing directly in front of the board, their ideas, thinking process, and even their animated presentation is all accessible to the audience. It's also easy for remote viewers and those playing back the presentation at a later date to become immersed in the content too, as the presenter is overlaid and the content is never compromised.

Chromakey-less CG Overlay

The Chromakey-less CG Overlay feature enables the presenter to deliver impactful supporting content in real-time, without a dedicated studio or expensive specialized content creators.

Users can autonomously create specific animated imagery, still pictures, and supporting graphics, which provide an easy backdrop to their presentation.

Version 2.0 only: Available from late 2019

AI-driven automatic control

Al-driven automatic control of output image offers hassle-free shooting and efficient workflow to meet increasingly difficult and diverse shooting opportunities.

PTZ auto-tracking

The REA-C1000 can accurately and smoothly track a presenter, to ensure they stay in focus and within the frame throughout their presentation. This feature offers users a cost-effective tracking solution in an education, corporate, or conference setting, without having to invest in a camera operator.

Focus Area Cropping — in Full HD

With Focus Area Cropping, an image from one camera can be simultaneously shown as two different output images. The user can choose to select a cropped image from the main still 4K image. What's more, the cropped area is selectable to be static or dynamic to follow the speaker's movement. This feature will be made available through a future software update later in 2019.

Version 2.0 only: Available from late 2019

Involve your audience

REA-C1000 technology can detect and react to the gestures of audience members participating in your presentation. For example, when an audience member stands up, the REA-C1000 can trigger the camera to electronically auto-zoom in to that person, which is particularly useful in education environments to measure students' reaction and in corporate presentation settings, such as during a Q&A session.

Specifications

Handwriting Extraction Required License. (60-day trial license is built-in as default) PTZ Auto Tracking Required License. (60-day trial license is built-in as default) Close-up by Gesture Required License. (60-day trial license is built-in as default) Chromakey-less CG Overlay Required License. (Available from firmware Version 2) Focus Area Cropping Required License. (Available from firmware Version 2) Fixed Area Cropping Crop the static area of the whole view at once. Intuitive Web-based User Interface HDMI IN 1 Up to 4K 30p (3840 × 2160/29.97P, 25P) HDMI IN 2 Up to FHD 60p (1920 × 1080/59.94P, 50P) IEDID]: Automatically determine and output a video image that is compatible with the connected output device.
