

Pro Series Extreme PRO-X-T-F

Pro Series Extreme microphone stands from Ultimate Support feature our new mechanism that allows you to fold the tripod legs upward for quick and easy storage, with a locking mechanism that makes sure the stand will be sturdy in use, and secure in transit. The base is made from die cast aluminum, ensuring the stand provides the sturdiness and weight users have come to expect from the line. Featuring the same thick-walled steel tubing shaft design that users expect from the Pro Series, combined with the heavy powder coated finish; Pro Series Extreme microphone stands remain 20 times stronger than the competition, and will be with you for a lifetime.

Locking Tripod Base

Mic tripod legs can lock in the open or closed position.

Quarter Turn Clutch

The clutch is over sized for better grip, it just takes a quarter turn to adjust the height.

Strong Materials

Mic tubing & base is steel and powder coated. Tubing is 1" in diameter, making it's tubing one of the largest in the market.

Fixed Mic Boom

Fixed mic boom tilts, pans, rotates, retracts and extends with one-touch adjustment.
