

# PRESENTER HUB

## PRESENTATION SYSTEM VP S1

The Presenter HUB redefines presentation systems, allowing for remarkable ease of video integration into a meeting room. Its integrated video hub supports both wired USB and HDMI video components (cameras, computers and media players) and wireless mobile devices using Airplay, Chromecast and Miracast. Outputs include HDMI, supporting up to 4K, and a USB media port for connection to a PC/Mac, supporting video conferencing, lecture capture or other video software applications.

Note: Miracast is not available in all countries. Please check with your local Distributor.

The unique Presenter HUB design allows end users to share relevant information on their local display through the USB media port. Share an image from your smartphone or iPad during a video conference: It's as easy as connecting your phone to the Presenter HUB via wireless display mirroring.

The Presenter HUB performs as a multi-faceted presentation system. With its annotation and highlighting capabilities on any live video source, and a digital whiteboard on demand, the person presenting can truly engage with their audience. And with the intuitive, icon-based Presenter Toolbar app available for iOS and Android, using the system is as easy as pushing a button. The app toolbar offers easy toggling of your presentation, slide control, live annotation, white boarding and the ability to change input sources "on the fly."

### FEATURES

- Digital Hub supports HDMI, USB, Airplay, Chromecast, Miracast and Ethernet.
- Presenter control of all video sources. HDMI inputs/outputs can be up/down converted to 4K
- Live Video Annotation
- Digital Whiteboard
