# Echo Expansion Bridge

EchoConnect:	Does Not Count
Aux Power:	100 mA or PoE

The Echo Expansion Bridge provides three functions:

- Provide a wireless connection for the EchoAccess mobile app through a connected Wireless Access Point (WAP).
- Combine up to four EchoConnect Power Supplies to create larger Echo control systems.
- Facilitates communication between Echo and Paradigm, allowing Paradigm to control Echo and Echo to tell Paradigm it's status.

# Echo Frequently Asked Questions

## Q: What Does a Distributed System mean?

A: In Echo control systems all of the intelligence is shared between all of the interconnected devices instead of a centralized control processor. For example, this means that each Output Device stores its own preset information and sends its status information out to the rest of the connected devices.

## Q: EchoConnect power supplies are measured in “U”s. What’s a “U”?

A: A “U” is a unit of power measurement. A unit counts as one control product and one output product. For example, a 6U power supply would power 6 control products and 6 output products.

## Q: When should I use a 6U vs a 16U power supply?

A: If you have more than 6 control products (stations, sensors, access, etc.) or more than 6 output products (zone controllers, panels, DMX Scene, etc.)

## Q: When do I need Aux power?

A: If you have a TimeClock, EchoAccess, DMX Scene Controller, Echo-Echoflex Interface, Echo Contact Interface, BACnet Interface, Echo Expansion Bridge or EchoTouch you need an Aux power unit.

## Q: Do I have to use ETC’s EchoConnect Station Power Supplies?

A: Yes. An EchoConnect power supply is required in all Echo systems and are only available from ETC.

## Q: Do I have to use ETC’s 24V Aux for auxiliary Power?

A: No. Any 24 volt power supply will work. It is not required to be provided by ETC but it is required by the products.

## Q: What does it mean that EchoAccess is a bonus power-wise?

A: The first EchoAccess in a system does not count against your power supply count. So you can have 7 stations on a 6U power supply if one is an EchoAccess station.

## Q: Can I use more than one power supply?

A: Without an Expansion Bridge, no. Only one power supply may be used at a time. Output products that also have power supplies in them have the option to have the power supply turned off.

## Q: What if I need more than 16 stations?

A: Add an Echo Expansion Bridge! That will give you a new max of 64U. But remember, you’ll still need power supplies to account for all the products.
