

# ISO-Tone™

## Turntable Isolation Platform

### FEATURES:

- Designed for Turntablists, Mobile DJs, Audiophiles and more
- Creates a cleaner and more accurate sound
- Improves low frequency clarity
- Decouples your turntable from its supporting structure
- Reduces acoustic feedback

The Auralex ISO-Tone's patented design features a functionally inert 3/4", Ozite®-covered, MDF platform supported by a 1" layer of **Platfoam™** making the ISO-Tone an effective isolation boundary that decouples the turntable from the structure underneath.

This combination of materials dramatically diminishes structural vibrations and resonances, resulting in reduced coloration with improved clarity and detail.
