## Switching Between Manual/Patch Mode

### What is "patch mode"?

The effect combinations and settings (sounds) are recalled as "patches". There are 72 patches. Out of the 72 patches, 36 (4 patches x 9 banks) can be saved in the user banks (9 banks of presets and 9 user banks). You can use the pedal to instantly switch between banks and patches.

Text shown on the display	Explanation
P 1-P9	Preset banks 1-9
U 1-U9	User banks 1-9

### What is "manual mode"?

Use the [BANK ▼] [BANK ▲] pedals, the [CTL] pedal and the number [1]-[4] pedals to turn the effects on/off that you set using the panel knobs. This lets you use this unit as if you were individually switching the compact effects on an effect unit board on/off.

1. Press the [MEMORY/MANUAL] pedal. Press this pedal to toggle between manual mode and patch mode. When patch mode is on, the red indicator is lit. When manual mode is on, the blue indicator is lit.

## Saving a Sound (Patch Write)

### NOTE

- If you turn off the power or switch to a different patch before you write the patch, the sound you created is lost.
- When you write a patch, the patch that is already at the save destination is lost.

1. Press the [WRITE] button. The pedal indicator blinks.

2. Press the [BANK ▼] [BANK ▲] pedals or the number [1]-[4] pedals to select the user bank and patch number where you want to save the patch.

- \* To cancel patch write, press the [EXIT] button.

3. Press the [WRITE] button once again. All sound settings except for OUTPUT LEVEL are saved.
