

Do you sing?
Do you play guitar?

Control your vocal harmony processor while you play guitar.

All you forward-thinking singers who use a harmony processor and play guitar now have the option of adding harmonies to more songs, more easily with the must-have harmony accessory; HarmonyControl | Guitar by TC-Helicon.

HarmonyControl | Guitar reads your guitar playing and tells your MIDI equipped harmony processor how to sing "the right stuff". If you've ever used Key and Scale harmony, you'll know it works wonderfully for a lot of songs, but now you can add even more harmony songs to your repertoire while you focus on playing and singing your best. Previously, only MIDI keyboard players had the ability to create spontaneous harmony parts but now it lies in your hands too.

It's Easy

All you do is connect HarmonyControl between your guitar and pedal board or amp. Your pure guitar tone is unaffected; it's as if HarmonyControl wasn't there. A supplied high-quality MIDI cable connects to the harmony processor you've already set up as usual with mic and PA connections. As you play

normally, HarmonyControl deciphers the chords in your music and sends it to your harmony processor through MIDI. It's working all the time so that when you lift the bypass on your processor, harmonies flow forth instantly.

It's Versatile

Your harmony processor isn't made by TC-Helicon? Too bad, but the good news is that HarmonyControl is compatible with a wide variety of harmony processors by TC-Helicon and others. Of course, our VoiceWorksPlus, VoiceLive, and VoiceWorks have extended features that make the harmonies even more musical. If your harmony processor has a MIDI input, it's likely HarmonyControl can give you the effortless musical control you've always hoped for.

HARMONYCONTROL™ guitar
GUITAR TO MIDI CONTROL INTERFACE

TC-HELICON
VOCAL TECHNOLOGIES

Using HarmonyControl with VoiceLive, VoiceWorks & VoiceWorksPlus:

- **Enhanced Scale Mode:** Scale presets are enhanced because HarmonyControl constantly adjusts the scale to work with the chords you play. Set your key, play along and enjoy smooth, parallel harmonies with no hassle.
- **Guitar-controlled Chord Mode:** Select a chord mode preset on any of these products and your guitar can supply the chords in real-time. Guitarists used to go to great expense to do this with MIDI guitar; now you can do it with your favorite axe!
- **Listen Key/Scale:** Set the key from your guitar. Don't know the key? Just play the chords from the song and HarmonyControl will decipher the key in real-time.
- **Auto detect:** connect the MIDI in and out with the supplied MIDI cable and TC-Helicon harmony products are automatically recognized so you get the enhanced features.

More Features

- **Guitar mute:** allows guitar to control harmonies without being heard – great for a cappella sections.
- **Guitar Tuner:** Easy to read note and pitch display keep your licks in tune.
- **On/Off Button:** Returns your harmony processor to its original function. This is great for times when the key and scale you've set work perfectly without the guitar's help.
- **Universal external power supply**
